

TUBERCULOSIS DATA BRIEF 2022

Tuberculosis (TB) is a communicable, potentially fatal disease that usually affects the lungs but can attack other parts of the body as well, including the kidneys, spine, and brain. It is an airborne infection that is spread when a person with an active case of TB breathes out the disease-causing bacteria, which are then inhaled by another person. TB is treatable, though new drug-resistant strains are appearing that are more difficult to treat. To prevent the disease from recurring in a drug-resistant form, nurses in the Guilford County TB control program use directly observed therapy protocols to ensure that patients are taking all medications as directed. In the last 20 years, TB rates have declined significantly in North Carolina and Guilford County. Between 2000 and 2021, Guilford County cases declined 71%, from 34 to 10 cases.

Reportable Disease	2015		2016		2017		2018		2019		2020		2021	
	Number	Rate	Number	Rate	Number	Rate	Number	Rate	Number	Rate	Number	Rate	Number	Rate
Tuberculosis	21	4.1	19	3.6	21	4.0	17	3.2	11	2.0	10	1.9	10	1.8
Population	517,600		521,330		526,953		533,213		537,174		540,521		542,410
