It's Kind of a Big Deal

Get the Facts.

Help Protect Yourself Against Meningococcal Disease

It takes **MORE THAN 1 DOSE** of the meningococcal conjugate vaccine to help **PROTECT TEENS** against meningococcal disease.

Teens who received their first dose of meningococcal conjugate vaccine at 11 or 12 years of age

SHOULD GET A BOOSTER VACCINE AT 16 YEARS OF AGE.

Meningococcal infection **CAN SPREAD QUICKLY**

and can cause death within **24 TO 48 HOURS.**

Teens and young adults aged **16 THROUGH 23** years are among those at greatest risk for meningococcal disease.
